
(a) LongGloDB: taxa the reference does not hold
102 ASVs, each species removed from the LSU reference
Inside a reference species: 4, called known 4
Inside none: 98, called known 0
LSU: distance to the nearest reference species (%)
>30 or none

G. gigantea KS302
called G. rosea (4)
ITS: distance to the nearest reference species (%)
(b) LongGloDB: species the reference holds
164 ASVs, LSU reference intact
Inside own species: 139, kept 135
Inside another species only: 8, called it 8
Inside none: 17, kept 1
F. mosseae BEG12: kept;
no ITS distance in the prediction
F. coronatus MR101
called F. mosseae (8)
41 ASVs at 0, 0
predicted inside a reference species
predicted inside none
called a known species or group
not called known
within-species spread (ITS and LSU)
